

Create a Composite

Directions:

The composite breeding system combines desirable traits of two or more breeds of cattle into one package.

Divide up into groups of three or four and research breeds of cattle, then create your own composite breed as a group. Write one paper which includes a description and all of the characteristics of the new composite breed. You should compose a picture of the new breed.

Your paper should include:

- A. Name of new composite breed
- B. Breeds used to create breed
- C. Why you selected those breeds
- D. Desirable traits from each breed
- E. Desirable traits which will be apparent in new composite breed
- F. Picture of new composite breed
